traditionally symbiosis research has been undertaken by researchers working independently of one another and often focused on a few cases of bipartite host symbiont interactions new model systems are emerging that will enable us to fill fundamental gaps in symbiosis research and theory focusing on a broad range

of symbiotic interactions and including a variety of multicellular hosts and their complex microbial communities in this research topic we invited researchers to contribute their work on diverse symbiotic networks since there are a large variety of symbioses with major roles in the proper functioning of terrestrial or aquatic ecosystems and we wished the topic to provide a venue for communicating findings across diverse taxonomic groups a synthesis of recent investigations in symbiosis can impact areas such as agriculture where a basic understanding of plant microbe symbiosis will provide foundational information on the increasingly important issue of nitrogen fixation climate change where anthropogenic factors are threatening the survival of marine symbiotic ecosystems such as coral reefs animal and human health where unbalances in host microbiomes are being increasingly associated with a wide range of diseases and biotechnology where process optimization can be achieved through optimization of symbiotic partnerships overall our vision was to produce a volume of works that will help define general principles of symbiosis within a new conceptual framework in the road to finally establish symbiology as an overdue central discipline of biological science

this symposium held august 4 10 1985 on the campus of oregon state university in corvallis is the sixth of a series of international symposia concerned with broad aspects of the fixation of nitrogen gas by biological and chemical means the first symposium of this series was held in pullman washington 1974 the second in salamanca spain 1976 the third in madison wisconsin 1978 the fourth in canberra australia 1980 and the fifth in noordwij erhout the netherlands 1983 prior to the organization of these symposia small groups of usually no more than 10 or 12 of the now old guard in the field met in some obscure places including butternut lake wisconsin sanibel island florida and camp sage hen in california to discuss developments in the field concern about an energy crisis in the nineteen seventies served as an impetus for the organization of workshops and preparatiol of publications urging government agencies to provide funds for the support of several neglected areas in the field including the genetics of nitrogen fixing organisms and the biology of frankia in looking back it becomes apparent that there have been drastic changes in the extent of research support in the field and in the contents of the programs of the continuing series of symposia
